Lean Six Sigma and the Balanced Scorecard are two popular management frameworks that have helped organizations improve their performance. However, these frameworks can only take you so far. To truly achieve breakthrough results, you need to go beyond them.

This article provides a guide for leaders on how to do just that. We'll discuss the limitations of Lean Six Sigma and the Balanced Scorecard, and we'll provide a roadmap for going beyond them.

The Limitations of Lean Six Sigma and the Balanced Scorecard

Lean Six Sigma is a data-driven approach to improving quality and efficiency. It focuses on identifying and eliminating waste in processes. The Balanced Scorecard, on the other hand, is a performance management framework that helps organizations align their goals and objectives with their overall strategy.

While both of these frameworks can be effective in improving performance, they have some limitations:

- **Lean Six Sigma is too focused on process improvement.** It doesn't take into account the human element of performance. Employees may not be fully engaged in the process, and they may not be able to sustain the improvements that are made.
- **The Balanced Scorecard is too static.** It doesn't account for the changing environment in which organizations operate. As a result, it can be difficult to keep the scorecard up to date and relevant.
- **Both frameworks are too focused on the short term.** They don't take into account the long-term consequences of decisions. This can lead to organizations making decisions that are not in their best interests in the long run.

Going Beyond Lean Six Sigma and the Balanced Scorecard

To truly achieve breakthrough results, you need to go beyond Lean Six Sigma and the Balanced Scorecard. This means taking a more holistic approach to performance improvement. You need to consider the human element of performance, the changing environment in which organizations operate, and the long-term consequences of decisions.

Here is a roadmap for going beyond Lean Six Sigma and the Balanced Scorecard:

1. **Start with a clear understanding of your organization's strategy.** What are your organization's goals and objectives? What are its core competencies? Once you have a clear understanding of your strategy, you can begin to develop a performance management system that is aligned with it.
2. **Involve employees in the process.** Employees are the ones who are doing the work, so it's important to get their input on how to improve performance. When employees are involved in the process, they are more likely to be engaged and to sustain the improvements that are made.
3. **Take a holistic approach to performance improvement.** Don't just focus on process improvement or financial results. Consider the human element of performance, the changing environment in which organizations operate, and the long-term consequences of decisions.
4. **Be flexible and adaptable.** The environment in which organizations operate is constantly changing. As a result, it's important to be flexible and adaptable in your approach to performance improvement. Be willing to change your plans as needed.

Going beyond Lean Six Sigma and the Balanced Scorecard is not easy, but it is possible. By following the roadmap outlined in this article, you can increase your organization's chances of achieving breakthrough results.

Lean Six Sigma and the Balanced Scorecard are two powerful management frameworks that can help organizations improve their

performance. However, these frameworks can only take you so far. To truly achieve breakthrough results, you need to go beyond them. This means taking a more holistic approach to performance improvement. You need to consider the human element of performance, the changing environment in which organizations operate, and the long-term consequences of decisions. By following the roadmap outlined in this article, you can increase your organization's chances of achieving breakthrough results.
