## Account Monitoring

One of the most important features of Chase Security is account monitoring. This service monitors your accounts for suspicious activity, such as unauthorized withdrawals or purchases. If any suspicious activity is

detected, Chase will send you an alert, so you can take action to protect your account.

Account monitoring is available for all Chase checking, savings, and credit card accounts. You can sign up for account monitoring online or by calling Chase customer service.

## **Fraud Alerts**

Fraud alerts are another important security feature offered by Chase. A fraud alert is a notice that you place on your credit report, which warns creditors that you may be a victim of identity theft. This can help to prevent identity thieves from opening new accounts in your name or using your existing accounts to make fraudulent purchases.

You can request a fraud alert by calling Chase customer service or by visiting any Chase branch.

## **Identity Theft Protection**

Identity theft protection is a comprehensive service that can help you protect your identity from being stolen. Chase offers two levels of identity theft protection: basic and premium.

Basic identity theft protection includes:

\* Monitoring of your credit report and alerts if any changes are made \*  
Assistance with identity theft restoration, if you become a victim \* Coverage for up to \$10,000 in expenses related to identity theft

Premium identity theft protection includes all of the features of basic identity theft protection, plus:

- \* Monitoring of your Social Security number and other personal information
- \* Identity theft insurance for up to \$1 million
- \* Access to a dedicated identity theft resolution specialist

You can sign up for identity theft protection online or by calling Chase customer service.

## **Other Security Features**

In addition to the features described above, Chase Security also offers a number of other security features, including:

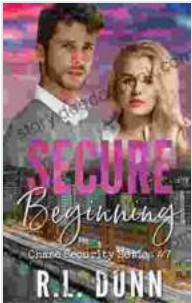

- \* Two-factor authentication: This security measure requires you to enter two pieces of information when you log in to your Chase account, such as your password and a code sent to your mobile phone.
- \* Data encryption: Chase uses data encryption to protect your personal and financial information when it is transmitted over the internet.
- \* Firewalls and intrusion detection systems: Chase uses firewalls and intrusion detection systems to protect its systems from unauthorized access.

## **How to Use Chase Security**

Using Chase Security is easy. Simply sign up for the services you want online or by calling Chase customer service. Once you're enrolled, Chase Security will start working to protect your financial information.

Chase Security is a comprehensive suite of security services that can help you protect your financial information. Whether you're banking online, using

your debit or credit card, or accessing your accounts via mobile app, Chase Security has you covered. By taking advantage of the features and services offered by Chase Security, you can help to keep your financial information safe and secure.
